Jack Koteles

Park Ridge, IL | 773-844-0924 | koteles@wisc.edu | linkedin.com/in/jackkoteles | github.com/jackkoteles

Education

University of Wisconsin-Madison — Madison, WI

B.S. Computer Science, B.S. Data Science, Certificate: Consulting — *August 2024 – May 2028*

Relevant Coursework:

Programming I–III, Intro to Algorithms, Data Science Programming I–II, Data Science Modeling I–II, Machine Organization and Programming, Intro to Computer Engineering, Discrete Math, Linear Algebra, Project Management

Experience

Incoming AI Engineering Intern — January 2027 – May 2027

PwC — *Chicago, IL*

- Advisory - Commercial Technology and Innovation

Assistant Camp Site Coordinator — May 2024 – August 2026

Park Ridge Park District — *Park Ridge, IL*

- Coordinated 10 counselors and 50+ campers, managing daily schedules and staff assignments
- Served as a primary point of contact for families, communicating updates and resolving concerns
- Administered first aid and led emergency response for injuries and incidents
- Led training sessions on camp policies and safety procedures

Project Manager — February 2026 – May 2026

AI @ UW — *Madison, WI*

- Led design and proposal of an AI-driven clinical intelligence platform for mental health
- Architected a three-component system: an ambient session engine for clinical signal extraction, a between-session patient check-in layer, and an alerting system that learns patient baselines and flags deviations
- Conducted competitive landscape research across existing tools to identify and validate an unserved market gap, then developed a proposal positioning the platform as the first end-to-end integration of session analysis, patient self-reporting, and AI-driven pattern recognition for mental health care
- Mentored team members through development, managed sprint deadlines, delegated across workstreams, and coordinated delivery of integrated components

Projects

CaseChorus - AI Research Assistant for SEC filings | *Python, PostgreSQL, Gemini, Next.js/TypeScript*

- Research tool that answers comparative strategy questions across an industry using only the companies' own SEC filings, with every claim cited to the source text so findings can be checked in seconds; built end to end as a RAG pipeline, from EDGAR ingestion and parsing through chunking, embeddings, retrieval and grounded generation
- Rebuilt retrieval: per-company search passes and rule-based selection in a Postgres function doubled companies covered per answer on industry-wide questions (2.7 to 5.4) with no loss in retrieval accuracy
- Built a 52-question eval set with a holdout split, scoring retrieval, citation faithfulness, exact-match figures and refusals; it retired a planned keyword-search path and exposed a bug that understated faithfulness by 44 points
- Proved design by loading a second industry from a new config file, exposing six hidden coupling defects including one that would have blended two industries' filings into the same answer

NFL Play Prediction Model | *Python, PyTorch, pandas, NumPy, nflreadpy*

- Predicts if an NFL play will succeed using pre-snap data such as down, distance, and field location
- Developed a basic predictive model to analyze patterns in pre-snap data
- Exported model predictions into Tableau to create a clear visual dashboard
- Conducted analysis to find which aspects of a play affect success or failure the most

Technical Skills

Languages: Python, Java, SQL, TypeScript, C, R, HTML/CSS
AI/ML: RAG pipelines, Embeddings, LLM Evaluation, Gemini API, PyTorch
Frameworks & Libraries: Next.js, Prisma, pandas, NumPy, JUnit, ggplot2
Databases: PostgreSQL, Supabase
Tools: Git/GitHub, Tableau, Google Cloud Platform, VS Code, RStudio, Claude Code, Excel
